CSCI111, Fall 2021 - Quiz 5 (Print legibly - do NOT write!)

Use the back page if you need more space for writing.

1. What is "Specification(s)"? Briefly.

Specifications are things while programming that we (or should) follow. Basically a set of rules or guidelines to adhere to, to get the output we want.

2. What is/are "Specification(s)" used for? Briefly

Specifications are used to make sure we're following the "laws" of the program, making sure everything is working the way we want to.

3. Is/are "Specification(s)" useful in achieving standardization (following "good practices")?

Yes, using specifications in program helps achieve standardization because it allows others to also know what's going on and it may help debug too.)
